Roles available:  
**Electrical Engineers**

Catch Energy is a global business that specialises in innovative emerging technologies to provide high-performance energy storage solutions for domestic and commercial installation.

Catch Energy has developed a range of battery storage solutions for both domestic and commercial applications and is working on solutions for the military, a portable compact off-grid system, telecom mast power, off-grid street lighting back-up, micro grids and utility systems. Seeking to innovate, the company has two R&D teams in the UK and Australia, developing creative storage solutions to meet today's challenges and those of the future.

With global commentators claiming that battery storage is a "game changing" technology, Catch Energy's solutions are the most flexible, reliable energy storage options available. They feature safe cell technology, user-friendly online control panels plus the option to grow through modular storage upgrades with all storage batteries backed by a market leading warranty.

Catch Energy has already raised £0.75m and is now looking for up to £5m of further funding. Funding to date has been used to design and develop 3 storage products for applications on and off grid to the domestic market (each product with scaleable capacity) and a commercial product (with scale-able capacity). The company has also started to establish a worldwide network of businesses (JVs and 3rd Party) as distribution partners and to identify potential projects and niche markets for its products.

#### Funding is now required for:

- Accreditation, IP applications and to bring storage solutions "market ready" for the UK, European, Australian and USA markets (£0.5m)
- International development of the distribution network (£0.5m)
- Infrastructure building and staff recruitment (£0.75m)
- Marketing and support materials and exhibitions (£0.5m)
- Stock building for UK, Australia and the international distributors (£2.0m)
- Contingency (up to £0.75m) to cover capital raising costs and unforeseen delays
